

MASTER STRATEGIC PLAN

Cash-First · Dual-Brand · SEO Growth · IELTS Parallel

Goal	Target	Timeframe
Living costs covered	15,000 AED	6 months — non-negotiable
Europe visa savings	51,000 AED total	Accumulated over time
IELTS backup plan	Target band score	3 hours/day protected
Brand authority	Dual-site SEO growth	Parallel — never sacrificed

Both websites updated in under one week · AI-assisted execution throughout

The Priority Framework — How to Read This Plan

This plan contains everything: immediate cash generation, website updates, dual-brand identity, SEO content, and IELTS protection. Because you have AI tools and can move fast, all of it is achievable. But every section is labeled with a priority tier so you always know what to do first when time is limited.

Tier	Label	Meaning	When to Execute
TIER 1	CASH NOW	Generates income within days to weeks. Non-negotiable in months 1–2.	Before anything else, every day
TIER 2	BUILD FAST	Site updates and infrastructure. Enables everything else. Complete in week 1.	This week — parallel to Tier 1 outreach
TIER 3	GROW SMART	SEO, content, brand architecture. Compounds over 60–90 days.	After Tier 1 and 2 are running
TIER 4	IELTS	3 hours/day, protected, non-negotiable. Your highest-value backup.	Every day — never sacrificed for Tiers 1–3

The key insight: Tier 1 and Tier 4 run every single day in parallel. Tier 2 is completed this week and never revisited. Tier 3 runs as a background process — 2 blog posts per week — and compounds quietly while Tiers 1 and 4 do the heavy lifting.

Section 1 — TIER 1: Cash Generation (Weeks, Not Months)

This section is your daily job until 15,000 AED is secured. Every morning begins here before any other task. These three methods are ranked by speed of income — execute them in order.

Method A — WhatsApp Chatbot Setup (Fastest Closing Time)

This is your fastest product. It requires no site update, no proposal, no waiting. One WhatsApp conversation, delivery in 5–7 days using your AI tools, one payment. A client can go from first contact to paying in under 48 hours.

Target Client

Iranian business owners in Dubai who already sell through WhatsApp — food businesses, clothing, perfume, gold accessories, home services. They lose sales every night when they sleep because no one answers messages. You solve this in one week.

Pricing

Package	Includes	Price	Delivery
Basic Bot	FAQ auto-reply, price list, order capture on WhatsApp	800–1,000 AED one-time	5 days
Smart Bot	AI-powered replies, product catalog, order tracking + Telegram	1,200–1,500 AED one-time	7 days
Bot + Maintenance	Either above + monthly updates and support	+ 300 AED/month	Ongoing

Outreach Message — Send Personally Today (Not in Groups)

Send this directly and privately to 10 Iranian business owners in your Telegram contacts or groups. Do not blast it — send it as a personal message:

سلام - آیا کسبوکار شما از طریق واتساپ می‌فروشد؟

، اگر بعد از ساعت کاری مشتری پیام می‌دهد و جوابی نمی‌گیرد ، فروش از دست می‌رود. من یک ربات واتساپ هوشمند راه‌اندازی

می‌کنم که ۲۴ ساعته پاسخ می‌دهد — از ۸۰۰ درهم، تحویل ۵ روزه
اگر علاقه دارید ۲۰ دقیقه صحبت کنیم؟

Send to 10 people today. Follow up with anyone who does not reply after 48 hours — once only. Track every contact in a simple spreadsheet.

Method B — Freelance Android/Mobile Work via Lumatic (Highest Per-Day Rate)

You have a registered Dubai company. This means you can legally invoice UAE businesses for development work as a B2B contractor — completely legal, no employee visa required. Your company bills the client, you deliver the work. This is the highest-paying method available to you.

Target Clients

- Small Dubai tech startups that need Android features but cannot afford a full-time developer
- App-based delivery or service businesses needing mobile improvements
- Any UAE company with an existing Android app that needs bug fixes, new features, or performance work

Rate and Structure

Work Type	Rate	Typical Duration	Monthly Potential
Bug fixes and small features	600–800 AED/day	2–5 days per project	2,400–4,000 AED
Feature module development	800–1,200 AED/day	5–15 days	4,000–12,000 AED
Full app or major rebuild	1,000–1,500 AED/day	20–40 days	20,000–40,000 AED

LinkedIn Outreach — Start This Week

Search 'Dubai startup CTO', 'Dubai app founder', 'Dubai tech startup Android'. Send 10 connection requests per day with this message:

Hi [Name],

I'm a senior Android developer (Kotlin, MVVM, KMM, Firebase) based in Dubai, available for B2B contract work through my registered UAE company – Lumatic Software Group.

I've shipped apps with 500K+ downloads and specialize in performance optimization and clean architecture.

If you ever need short-term Android capacity, I'd be happy to discuss. No commitment – just a conversation.

Best, Mahdi

Even one 10-day contract at 1,000 AED/day = 10,000 AED. This single method can cover your entire 6-month target with two contracts.

Method C — Simple Business Website (Fastest Delivery with AI Tools)

With AI tools you can deliver a professional 5-page business website in 2–3 days. Target: Iranian business owners in Dubai who have a trade license but no web presence. They need something credible for meetings and Google visibility — not an SEO machine.

Package	Includes	Price	Delivery with AI Tools
Basic Presence	5-page site, mobile-responsive, WhatsApp CTA, contact form	1,200–1,500 AED	2–3 days
Business + Bot	5-page site + WhatsApp chatbot setup	2,200–2,800 AED	5–7 days
Full Launch	Site + bot + 3 blog posts + Google Search Console setup	3,500–4,500 AED	10–14 days

6-Month Cash Target — Conservative Scenario: 2 chatbot setups/month (2,000 AED) + 1 freelance Android contract every 6 weeks (8,000–10,000 AED) + 1 website/month (1,500 AED) = 3,500–4,500 AED/month = 21,000–27,000 AED over 6 months. This comfortably covers the 15,000 AED living cost target.

Referral System — Activate from Client One

After every completed project, offer: 500 AED cash or one free maintenance month for every paying referral. In the Iranian business community, one satisfied client can unlock four or five more through personal recommendation. Start this from your very first delivery.

Section 2 — TIER 2: Both Websites Updated This Week

You have AI tools and can move fast. Both sites get done this week — in parallel with Tier 1 outreach. The goal is not perfection; it is making both sites convert the visitors and contacts they already receive.

abbasian.dev — 5-Day Update Plan

Day	Task	Time Required	Impact
Day 1	Add floating WhatsApp button site-wide (HTML/CSS snippet). Add 'Available for Contract Work' banner with Lumatic company name.	1–2 hours	Immediate — converts existing traffic
Day 2	Add Services section: Android Development (contract), WhatsApp Chatbot Setup, Business Website. Include visible price ranges.	2–3 hours	Immediate — removes friction for interested visitors
Day 3	Migrate to Next.js 14 on Vercel using AI tools. Rebuild homepage, about, projects, contact. Set up /en/, /fa/, /ar/ routes.	4–6 hours with AI	Critical — unlocks all future SEO growth
Day 4	Add Lumatic bridge section below experience timeline. Add 'Work With Us' page at /company. Set up MDX blog system.	3–4 hours	Brand architecture — protects both identities
Day 5	Add schema markup (Person + LocalBusiness). Generate sitemap.xml. Submit to Google Search Console. Deploy Cloudflare CDN in front of Vercel.	2–3 hours	SEO foundation — Google begins full indexing

Next.js migration on Day 3 is achievable in one day with AI tools. Use Claude or Cursor to rebuild page by page. Vercel deployment is automated from GitHub — the infrastructure work is minimal. Focus your AI assistance on the MDX blog setup and i18n routing, which are the most time-consuming pieces.

lumaticgroup.info — Fix and Launch This Week

URGENT: *lumaticgroup.info* returns a 403 Forbidden error. Google cannot crawl it. Fix this before any other work on this site. Check Cloudflare dashboard → Security → Firewall Rules first — this is the most common cause.

Day	Task	Time Required
Day 1 (simultaneous)	Fix 403 error. Verify site is accessible and crawlable.	1–2 hours
Day 2	Build complete homepage using Lumatic marketing materials (English PDF + Farsi slides). Services page with pricing.	3–5 hours with AI
Day 3	Add WhatsApp CTA (+971 50 265 9885) on every page. Add 'Led by Mahdi Abbasian, Senior Mobile Developer' with backlink to abbasian.dev.	1–2 hours
Day 4	Add contact page, about page, and portfolio/case studies section. Submit sitemap to Google Search Console.	2–3 hours
Day 5	Cross-link review: ensure all links between abbasian.dev and lumaticgroup.info are dofollow and correct.	1 hour

Section 3 — Dual-Brand Identity Architecture

The single sentence that governs all identity decisions: 'I am a Senior Mobile Developer who founded an AI-powered studio to serve Dubai businesses — I still code, I just also lead.' This framing makes both brands stronger, not weaker.

The Three-Zone System

Zone	Platform	Audience	Your Identity	Lumatic Presence
Zone 1	abbasian.dev	Recruiters, developers, technical clients	Senior Mobile Developer — primary identity	One bridge section only — framed as a founder who codes
Zone 2	lumaticgroup.info	Dubai SME business owners	Developer-led studio founder	Full commercial presentation — all marketing materials
Zone 3	Telegram/WhatsApp groups	Business clients seeking digital services	Lumatic Software Group representative	Company brand only — never personal developer brand

Exact Language by Platform

On abbasian.dev — The Bridge Section (Exact Code)

```
// Place BELOW experience timeline, ABOVE contact section
// NEVER use 'CEO' or 'Founder' here – always 'I founded' / 'I build'

<section id='company'>
  <h2>Beyond Code: Lumatic Software Group</h2>
  <p>
    In addition to my work as a Senior Mobile Developer,
    I founded Lumatic Software Group – a Dubai-based studio
    that applies AI to help local businesses launch digital
    products affordably.
  </p>
  <p>
    If you need a website, WhatsApp automation, or AI-powered
    tools for your Dubai business, I build those too.
  </p>
  <a href='https://lumaticgroup.info' target='_blank' rel='noopener'>
    See Lumatic Software Group → { /* dofollow – passes link equity */ }
  </a>
</section>
```

On lumaticgroup.info — Developer-Led Framing

In the About section or footer: 'Led by Mahdi Abbasian, a Senior Mobile Developer with 6+ years of experience building apps with 500K+ downloads.' Link back to abbasian.dev as a dofollow link. This makes the company more credible, not less — clients trust a real developer is behind the work.

On LinkedIn — Keep Developer Headline

Headline stays: Senior Mobile Developer | Android & Kotlin Specialist | Dubai. Lumatic appears as a separate Experience entry: 'Founder, Lumatic Software Group — AI-powered digital services for UAE businesses.' This adds to your profile rather than replacing your core identity.

In Groups — Company Brand Only

All marketing content (PDFs, Farsi slides, service offers) is shared only as Lumatic Software Group — never as personal developer content. Keep these two audiences completely separated. A business client seeing your developer portfolio is fine. A technical recruiter seeing your chatbot sales pitch creates confusion.

Section 4 — TIER 3: SEO & Content Growth (Background Process)

This section runs as a background process — 2 posts per week, 45–60 minutes each with AI assistance. It does not compete with Tier 1 cash generation. It runs alongside it and compounds quietly. By month 3, it begins generating inbound leads. By month 6, it is your most valuable asset.

Why the Farsi SEO Gap Is Your Biggest Long-Term Opportunity

A direct search of Google for Farsi-language content targeting Dubai business services returns almost no quality results. You can rank on page one within 60–90 days for terms like 'طراحی سایت' and 'دبی' because no quality competitor exists in this language for this market. This is a genuine first-mover opportunity that English and Arabic agencies cannot replicate.

The 800-Word Post Framework

Section	Words	Purpose
H1 — keyword-optimized title	10–15	Primary keyword: Google's first reading
Intro — the pain point	80–100	Hook with a problem the reader recognizes
H2 — the solution	100–120	Your service as the natural answer
H2 — how it works (3 steps)	150–200	Process transparency builds pre-contact trust
H2 — realistic result or example	120–150	Social proof — even a hypothetical scenario works initially
H2 — cost and what is included	80–100	Commercial intent fulfilled — why people are actually searching
CTA — WhatsApp contact link	40–60	Conversion trigger — direct, specific, language-matched

Content Calendar — Weeks 1–12

Weeks 1–4 (Month 1) — Foundation

Week	Post 1 (English)	Post 2 (Farsi)
Week 1	How to Set Up a WhatsApp Chatbot for Your Dubai Business	طراحی سایت حرفه‌ای در دبی با کمترین هزینه
Week 2	The Real Cost of Web Development in Dubai	ربات واتساپ برای کسب‌وکار ایرانی در دبی
Week 3	5 Signs Your Dubai Business Needs WhatsApp Automation	چطور بدون دفتر فیزیکی در دبی آنلاین بفروشیم
Week 4	Why Dubai Small Businesses Lose Customers Without a Website	هوش مصنوعی برای کسب‌وکار کوچک در دبی

Weeks 5–8 (Month 2) — Niche Targeting

Week	Post 1	Post 2
Week 5	Android App Development for Dubai Startups: Costs and Timeline	سیستم پیشنهادگر هوشمند برای فروشگاه‌های دبی
Week 6	How AI Chatbots Are Replacing Reception Staff in Dubai	راهنمای راه‌اندازی کسب‌وکار ایرانی در دبی
Week 7	Bilingual Arabic-English Website: Why Dubai Businesses Need Both	خدمات دیجیتال با قیمت مناسب برای استارت‌آپ دبی
Week 8	WhatsApp vs Website: Which Does a Dubai Business Need First?	تولید محتوای تبلیغاتی با هوش مصنوعی برای دبی

Weeks 9–12 (Month 3) — Authority Building

By week 9, your first posts will begin appearing in Google results. At this point, add one Arabic post every two weeks targeting UAE SME owners. Continue English and Farsi posts and begin adding internal links between related posts to build topical authority across the blog.

On-Page SEO Rules — Every Post

- Primary keyword in: H1 title, first 100 words, one H2 subheading, and meta description (150–160 characters exactly)
- One internal link to services page and one WhatsApp contact link in every post
- One contextual dofollow link to lumaticgroup.info — this builds the company domain authority over time
- Schema markup: BlogPosting type with author, datePublished, and description
- Image alt text in the post's language — Farsi alt text for Farsi posts

SEO Authority Transfer Strategy

Every blog post on abbasian.dev includes one natural contextual link to lumaticgroup.info. Vary the anchor text naturally across posts. Over 6 months of consistent publishing, this link pattern is the primary driver of lumaticgroup.info's Google ranking improvement — a direct, cost-free investment in the company domain that happens automatically as you publish content.

Section 5 — Telegram & WhatsApp Group Strategy

Replace daily PDF blasting immediately. It is being ignored and damaging your credibility in those groups. The new approach takes the same time but converts far better.

The New Post Formula — 3-Part Structure

Part	Content	Example
Hook — 1 line	Sharp question or specific observation	'آیا می‌دانید بیشتر کسب‌وکارهای دبی ۴۰٪ مشتریان واتساپ خود را بعد از ساعت کاری از دست می‌دهند؟'
Value — 2–3 lines	Genuine useful insight — not a sales pitch	'یک ربات هوشمند می‌تواند شبانه‌روز قیمت، موجودی و ثبت سفارش را مدیریت کند — بدون نیاز به استخدام نیرو.'
Link — 1 line	Blog post URL framed as useful reading	'توضیح کامل با قیمت: abbasian.dev/fa/blog/whatsapp-bot-dubai '

Group Tier System

Tier	Group Type	Frequency	Language	What to Post
Tier 1 — Daily	Iranian/Persian business communities in Dubai	Daily	Farsi first, English second	Chatbot and website value posts + blog links
Tier 1 — Daily	Active Dubai startup groups (500+ members, real conversations)	Daily	English	Android contract availability + digital service tips
Tier 2 — 3x/week	Dubai women entrepreneur groups	3x/week	English + Arabic	Website and WhatsApp automation for home businesses
Tier 2 — 3x/week	Deira/Al Quoz trading company groups	3x/week	Farsi + English	Simple web presence and chatbot for trading companies
Tier 3 — Test	General UAE business groups	Weekly	English	Test for 3 weeks — drop if zero direct messages result

Personal Follow-Up Protocol

1. Message anyone who engages within 4 hours — with a question about their business, never a pitch
2. In Farsi groups, always reply in Farsi — the language match dramatically increases trust and response rate
3. Offer a free 20-minute consultation by voice call, not a written audit — voice creates obligation and real conversation
4. Track in spreadsheet: name, group, date contacted, outcome. Follow up twice maximum then remove.
5. After any completed call, send a WhatsApp voice note summary in their language — this is rare and memorable

Section 6 — Service Packages

Three packages maximum. Simple enough to explain in one WhatsApp message. Priced to remove hesitation at first contact. Deliverable fast with AI tools.

Package	What Is Included	Price	Delivery	Best For
Starter — WhatsApp Bot	AI chatbot on WhatsApp/Telegram. Handles pricing, FAQs, order capture. 30-day support included.	800–1,500 AED + 300/month	5–7 days	Home businesses, food, beauty, retail
Business — Web + Bot	5-page Next.js bilingual site (EN+FA or EN+AR) + WhatsApp chatbot. Mobile-responsive, SEO-ready.	2,500–3,500 AED + 400/month	7–14 days	Trading companies, shops, services
Growth — Full Digital	Website + chatbot + 8 SEO blog posts + Google Search Console + monthly content report.	4,000–5,000 AED + 800/month	21–30 days	SMEs wanting inbound Google leads

Income math: 3 Starter bots/month (3,000–4,500 AED) + 1 Android contract every 6 weeks (8,000–12,000 AED) + 1 Business website/month (2,500–3,500 AED) = 4,500–8,000 AED/month by month 3. The 15,000 AED 6-month target is covered by month 4 at minimum.

Section 7 — IELTS: Protected Daily Block

Your IELTS plan is strategically correct and must be protected aggressively. An IELTS score is your highest-value single asset — it opens corporate contracts, potentially 8,000–15,000 AED/month, that no amount of chatbot sales can match. Protect 3 hours every day as non-negotiable.

Why IELTS Is Tier 4 — Not Lower

The freelance path through Lumatic has a ceiling defined by your current network size and working hours. IELTS breaks through that ceiling entirely. As an Iranian national in Dubai, an IELTS score combined with your registered UAE company and senior Android skills creates a profile that can command corporate B2B contracts — paid to your company, legally, at rates that dwarf individual service sales.

Even if the Lumatic revenue plan succeeds completely, IELTS still accelerates the Europe visa timeline by opening higher-income opportunities. The two plans are not competing — they reinforce each other.

Daily Time Block Structure

Time Block	Activity	Duration	Tier
Morning (fixed)	IELTS study — reading, writing, listening, speaking practice	3 hours	Tier 4 — never moved
Mid-morning	Tier 1 outreach: 10 LinkedIn messages + 5 personal Farsi messages + group posts	1.5 hours	Tier 1
Afternoon	Client delivery work or website development (Tier 2 this week)	3 hours	Tier 1 / 2
Evening	One blog post (with AI assistance) or content scheduling for groups	1 hour	Tier 3
Evening	Follow up on any responses from morning outreach	30 min	Tier 1

Section 8 — Revenue Timeline & Projections

6-Month Cash Flow — The Non-Negotiable Target

Mon th	Primary Income Sources	Conservative	Realistic	Key Milestone
1	2 chatbot setups + LinkedIn outreach begins + 1 website	2,500 AED	4,000 AED	First paying client within 2 weeks
2	1 Android contract (5–10 days) + 2 chatbot setups	4,500 AED	8,000 AED	First B2B Android contract closed
3	SEO posts begin ranking + 1 contract + 2 bots + referrals start	3,500 AED	6,000 AED	First inbound Google lead from Farsi content
4	Retainer base growing + 1 contract + ongoing projects	4,000 AED	7,000 AED	3 active monthly retainers
5	Referral chain active + consistent pipeline	4,000 AED	7,500 AED	Monthly income predictable and stable
6	Full pipeline: contracts + bots + retainers + inbound SEO	4,500 AED	9,000 AED	15,000 AED target surpassed

Scenario	6-Month Total	vs 15,000 AED Target	Europe Savings Start
Conservative	23,000 AED	Exceeds by 8,000 AED	Month 4–5
Realistic	41,500 AED	Exceeds by 26,500 AED	Month 3
With 1 large Android contract	50,000+ AED	Exceeds by 35,000 AED	Month 2

Path to 51,000 AED Europe Savings

The 51,000 AED is accumulated into a dedicated bank account over time — not earned in a single burst. Based on the projections above, you begin setting aside savings from month 3–4

once living costs are covered. At 1,500–2,000 AED saved per month from month 4 onward, the full 51,000 AED accumulates over approximately 24–30 months from today — alongside your visa income documentation building simultaneously.

European visa officers for Iranian applicants look for 6+ months of consistent bank deposits — not a lump sum. Every client invoice and every monthly deposit from month 1 is building your visa application simultaneously. Issue formal invoices from your very first client, even for 800 AED.

Section 9 — Financial Documentation for Europe Visa

Three Non-Negotiable Financial Habits — Start Week 1

6. **Dedicated business bank account:** Open immediately. All client payments go here — zero personal spending mixed in. Emirates NBD, ADCB, and Mashreq all have accessible accounts. Every deposit from every client must flow through this single account.
7. **Formal invoice for every transaction:** Issue a PDF invoice for every project, even 800 AED chatbot setups. Invoice must show: Lumatic Software Group, service description, amount, client name, date, your UAE company registration number. Ten invoices over 6 months is stronger visa evidence than the money itself.
8. **Monthly savings transfer:** From month 3 onward, transfer a fixed amount to a separate savings account on the same day each month. Even 500 AED/month shows a consistent savings pattern. Visa officers read bank statements looking for this behavior.

The paper trail of consistent monthly deposits and formal invoices over 6 months is worth more to a European visa application than the total amount. Start both habits from your first client payment — no exceptions.

Section 10 — This Week: Complete Action Plan

Everything in this plan begins this week. These actions are organized by day. Tier 1 outreach runs every morning regardless of what else is happening.

Day 1 — Monday

Time	Task	Tier
Morning (3 hrs)	IELTS study	4
Mid-morning (1.5 hrs)	Send 10 LinkedIn connection requests to Dubai startup CTOs. Send 10 personal Farsi WhatsApp messages to Iranian business owners offering chatbot demo.	1
Afternoon (3 hrs)	Fix 403 on lumaticgroup.info. Add WhatsApp floating button to abbasian.dev current site. Open dedicated business bank account.	2
Evening (1 hr)	Write first Farsi blog post: 'طراحی سایت حرفه‌ای در دبی با کمترین هزینه'	3

Day 2 — Tuesday

Time	Task	Tier
Morning (3 hrs)	IELTS study	4
Mid-morning (1.5 hrs)	Follow up on Day 1 LinkedIn + WhatsApp responses. Post value message + blog link in 3 Farsi Telegram groups.	1
Afternoon (3 hrs)	Begin Next.js 14 migration with AI tools. Deploy skeleton to Vercel. Rebuild homepage and about page.	2
Evening (1 hr)	Build lumaticgroup.info homepage using Lumatic marketing content (English PDF + Farsi slides as reference).	2

Day 3 — Wednesday

Time	Task	Tier
Morning (3 hrs)	IELTS study	4
Mid-morning (1.5 hrs)	10 new LinkedIn requests. Personal follow-ups. Respond to any Telegram/WhatsApp group replies.	1

Time	Task	Tier
Afternoon (3 hrs)	Complete Next.js migration: projects page, services section, contact. Add WhatsApp CTA. Set up /fa/ and /ar/ routes.	2
Evening (1 hr)	Complete lumaticgroup.info: services page, WhatsApp CTA on every page, 'Led by Mahdi Abbasian' section with backlink.	2

Day 4 — Thursday

Time	Task	Tier
Morning (3 hrs)	IELTS study	4
Mid-morning (1.5 hrs)	10 LinkedIn. Group posts. First personal consultations if any contacts responded.	1
Afternoon (3 hrs)	Add Lumatic bridge section to abbasian.dev. Add /company page. Set up MDX blog. Publish first Farsi post.	2 / 3
Evening (1 hr)	Add schema markup (Person + LocalBusiness) to abbasian.dev. Generate sitemap.xml.	2

Day 5 — Friday

Time	Task	Tier
Morning (3 hrs)	IELTS study	4
Mid-morning (1.5 hrs)	Group posts. All follow-ups. Begin invoicing any converted clients.	1
Afternoon (3 hrs)	Submit both sitemaps to Google Search Console. Set up Cloudflare CDN for Vercel. Final review of both sites.	2
Evening (1 hr)	Write first English blog post: 'How to Set Up a WhatsApp Chatbot for Your Dubai Business'	3

End of Week 1 checklist: Both sites live and accessible. abbasian.dev on Next.js with WhatsApp button, Services section, Lumatic bridge, and first blog post published. lumaticgroup.info showing full services, no 403 error, WhatsApp CTA on every page. 50 LinkedIn outreach messages sent. 50 personal Farsi messages sent. Google Search Console tracking both sites. Dedicated business bank account open.

The Four Things Running in Parallel Every Day

Every Day	Time	Why It Cannot Stop
IELTS Study	3 hours — morning, protected	Highest income ceiling breakthrough available to you
Tier 1 Outreach	1.5 hours — 10 LinkedIn + 5 personal Farsi messages	The only thing that generates cash this week
Client Delivery	3 hours — whatever is in the pipeline	Reputation and referrals are built here
1 Blog Post	1 hour — with AI assistance, alternating Farsi and English	The compound interest of your entire strategy

You are a Senior Mobile Developer who founded a studio. You still code. You just also lead.

abbasian.dev · lumaticgroup.info · +971 50 265 9885 · Dubai, UAE
